Prague

SUMMARY

I'm a Senior Frontend Engineer with 15 years of programming experience and 9 years building React applications in production.

For the past 7 years, I've been part of a high-growth company, helping build products from the ground up. I've worked on a real-time trading platform that processes billions of euros and a global sports betting platform used daily by hundreds of thousands of users in more than 30 languages. What I enjoy most is building products, not just features. I like taking an idea, figuring out the right architecture, solving the hard technical problems, and shipping something that people actually use. Alongside my full-time work, I've co-founded several SaaS products, including Schema Flow, one of the leading SEO apps for Webflow, and I'm currently building AI tools focused on structured data and web automation.

I'm happiest in small, product-focused teams where I can have ownership over both technical decisions and the product itself. I care about writing maintainable code, building systems that can grow over time, and creating products that solve real problems.

EXPERIENCE

Cofounder (Side Project) 01/2024 - Present

Schema Flow Remote

- Co-founded Schema Flow to explore full-stack product development and AI integration in real-world applications.
- Designed infrastructure capable of handling high traffic efficiently while keeping operating costs low.
- Built an advanced dynamic form system that automatically renders an intuitive no-code editor from JSON-LD.
- Implemented a system that evolved from a AI-driven schema generator to a full website analysis engine.
- Performed deep crawl and evaluation of all site pages, providing prioritized improvement recommendations and calculating an AI-based SEO rating.

Senior Frontend Engineer / Product Architect 05/2019 - 09/2025

Oddin.gg Remote

- Solely designed and developed the company's main trading application, processing billions of EUR in transactions.
- Designed the GraphQL schema, business flows, UX, and UI without a dedicated designer.
- Built a scalable architecture that has run flawlessly for 7 years and remains easy to extend.
- Rated by professional traders as the best trading app they've used in the industry.
- End-to-end delivery of a high-traffic application used by hundreds of thousands of users daily in 30+ languages.
- Delivered the first version entirely solo; later led a redesign with a UX designer to create a tokenized design system allowing deep client customization via configuration.
- Product became a key growth driver, significantly expanding the company's global reach.
- Acted as long-term technical steward for core frontend products, ensuring they remain scalable, maintainable, and business-relevant.
- Took multiple products from concept to production, including architecture, UX design, and delivery, with measurable business impact.
- Built products for an international audience with robust localization and customization capabilities.

Front end developer 01/2017 - 05/2019

RTSmunity Praha, Česká republika

- Worked on the company's core back-office trading application, delivering new features and maintaining a mission-critical platform used daily by traders.
- Independently designed and developed a new trading tool for market makers, from architecture to implementation, ensuring performance, usability, and scalability.
- Collaborated closely with stakeholders to translate complex trading workflows into intuitive, efficient user interfaces.

KEY ACHIEVEMENTS

Schema Flow co-founder

Built SEO Webflow app reaching top 3 category apps.

Global sports betting platform

Core engineer for product used across 30+ languages worldwide.
